■ WEEK 1 WORK PLAN

9 Days — June 22 to June 30, 2026

Research & Planning Phase

AI-Powered Travel Sentiment & Trend Analytics Platform

7th Semester Project

Day	Date	Focus	Hours
Day 1	22 Jun	Project Setup	~2.5 h
Day 2	23 Jun	Problem Understanding	~3.0 h
Day 3	24 Jun	Dataset Research	~2.5 h
Day 4	25 Jun	Tech Stack + Environment	~3.0 h
Day 5	26 Jun	NLP Basics	~3.0 h
Day 6	27 Jun	Rest / Catch Up	0–2 h
Day 7	28 Jun	Research Papers + Week Review	~2.5 h
Day 8	29 Jun	Dataset Decision	~2.5 h
Day 9	30 Jun	Phase 1 Wrap Up	~2.0 h

Total estimated: ~21 hours across 9 days

Focus: Project Setup

Task	Category	Time	Notes
Create project folder structure	Coding	0.5 h	*Folders: data/, notebooks/, src/, docs/, models/*
Create GitHub repo + first commit	GitHub	0.5 h	*Add README.md and .gitignore (Python template)*
Set up tracker in Google Sheets	Documentation	0.5 h	*Fill in your info, bookmark on phone*
Watch 1 intro video on NLP	Research	1.0 h	*YouTube: 'Sentiment Analysis explained'*

■ *Start small. Just get the foundations in place — folder, repo, tracker. That's a full win for Day 1.*

Total estimated: **~2.5 hours**

Focus: Understanding the Problem

Task	Category	Time	Notes
Research what Travel Sentiment Analysis means	Research	1.0 h	*Google Scholar / Medium articles*
Find 3 similar projects on GitHub	Research	1.0 h	*Search: 'travel sentiment analysis github'*
Write a 1-page project summary in docs/	Documentation	1.0 h	*What problem, what data, what output*

■ *Don't skip the research phase. Students who understand WHY before HOW always do better in viva.*

Total estimated: **~3 hours**

y) Focus: Dataset Research (No collecting yet!)

Task	Category	Time	Notes
Search Kaggle for travel review datasets	Research	1.0 h	*Just browse — download nothing yet*
List potential data sources in tracker	Documentation	0.5 h	*Fill 6_Datasets_APIs sheet*
Research Twitter/X API — free vs paid limits	Research	1.0 h	*Check developer.twitter.com*

■ *Just browse and list sources today. Do NOT download anything or scrape anything — that's July's job.*

Total estimated: **~2.5 hours**

Focus: Tech Stack Decision + Environment Setup

Task	Category	Time	Notes
Decide NLP library: NLTK vs spaCy vs HuggingFace	Research	1.0 h	*Compare on Medium — pick one for now*
Decide dashboard tool (Streamlit recommended)	Research	0.5 h	*Streamlit is easiest to start with*
Set up Python virtual environment	Coding	1.0 h	*pip install pandas numpy matplotlib nltk*
Install and test Streamlit	Coding	0.5 h	*Run: streamlit hello — just verify it works*

■ *Pick Streamlit for your dashboard — easiest for beginners and looks great in demos.*

Total estimated: **~3 hours**

Focus: NLP Basics — Learn the Core Skill

Task	Category	Time	Notes
Learn tokenization + stopwords in NLTK	NLP/ML	1.5 h	*Follow any NLTK beginner tutorial*
Write a tiny test: clean a sample sentence	Coding	1.0 h	*Save as notebooks/nlp_test.ipynb*
Push notebook to GitHub	GitHub	0.5 h	*Commit message: 'NLP basics test notebook'*

■ *Don't try to master NLP in one day. Just understand tokenization and sentiment scoring at a basic level.*

Total estimated: **~3 hours**

Focus: Rest Day / Catch Up

Task	Category	Time	Notes
Catch up on any missed tasks from Mon–Fri	Any	—	*Check your Daily Log — what's still 'In Progress'?*
OR: Take a proper rest day	—	—	*No guilt. Rest is part of the process.*

■ *Consistency beats intensity. If you're behind, catch up today. If you're on track — take a real break. You earned it.*

Total estimated: **0–2 hours (your call)**

Focus: Research Papers + Week Review

Task	Category	Time	Notes
Read 2 research papers on travel/hotel sentiment	Research	1.5 h	*Google Scholar: 'hotel review sentiment analysis'*
Update Roadmap — mark Research phase at 80%	Documentation	0.5 h	*Open 2_Roadmap in your tracker*
Write Week 1 sprint reflection in tracker	Documentation	0.5 h	*4_Weekly_Sprints → add your notes*

■ *Reading even 1 research paper puts you ahead of 90% of students doing similar projects.*

Total estimated: **~2.5 hours**

Focus: Dataset Decision Day

Task	Category	Time	Notes
Pick your primary dataset from Kaggle	Research	1.0 h	*'Hotel Reviews' dataset recommended*
Download it — check structure in Jupyter	Research	1.0 h	*Run: df.head(), df.info(), df.shape*
Update 6_Datasets_APIs sheet in tracker	Documentation	0.5 h	*Mark status as 'Collected'*

■ *The Hotel Reviews dataset on Kaggle (515k reviews) is a great starting point. Simple, clean, ready to use.*

Total estimated: **~2.5 hours**

Focus: Phase 1 Wrap Up

Task	Category	Time	Notes
Update all tracker sheets	Documentation	0.5 h	*Roadmap → 100%, Sprints → reflection done*
Push everything to GitHub	GitHub	0.5 h	*Clean commit: 'End of Research & Planning phase'*
Plan July goals in tracker	Documentation	1.0 h	*Write Week 3–4 goals in 4_Weekly_Sprints*

■ *By end of today you should have: GitHub repo, Python env, 1 dataset, NLP basics done. That's a strong foundation.*

Total estimated: **~2 hours**

9-DAY SUMMARY

Day	Date	Focus	Est. Hours
Day 1	22 Jun	Project Setup	~2.5 h
Day 2	23 Jun	Problem Understanding	~3.0 h
Day 3	24 Jun	Dataset Research	~2.5 h
Day 4	25 Jun	Tech Stack + Environment	~3.0 h
Day 5	26 Jun	NLP Basics	~3.0 h
Day 6	27 Jun	Rest / Catch Up	0–2 h
Day 7	28 Jun	Research Papers + Week Review	~2.5 h
Day 8	29 Jun	Dataset Decision	~2.5 h
Day 9	30 Jun	Phase 1 Wrap Up	~2.0 h
TOTAL			**~21 hours**

What you'll have by June 30 ■

- ✔ A working GitHub repository with your project structure
- ✔ Python virtual environment with all core libraries installed
- ✔ 1 real travel dataset downloaded and inspected
- ✔ Basic NLP knowledge (tokenization, stopwords, sentiment scoring)
- ✔ A fully updated Semester Project Tracker
- ✔ 2+ research papers read — ready for viva questions
- ✔ A clear plan for July (Data Collection & Cleaning phase)

Remember: Log every task in your Daily Log sheet — even 30-minute sessions count. Your tracker will show your progress building up week by week. By October you'll have a project AND a data-driven record of how you built it. That record is what impresses supervisors and interviewers. Keep going. ■
