# Final Year Project — Day 1 Setup Notes

AI-Powered Travel Sentiment and Trend Analytics Platform

---

## 1. What Was Done Today

Set up the local project environment and version control for the project, so that all future work can be tracked and backed up from the start of the semester.

- Installed Git and configured identity (name + email)
- Created the project folder structure on E: drive
- Created starter files: requirements.txt, .gitignore, README.md
- Initialized Git in the project folder
- Made the first commit (saved a version snapshot)
- Created a GitHub repository (online backup + portfolio link)
- Connected local project to GitHub and pushed first commit

## 2. Folder Structure Created

Project root: E:\Projects\AI-Powered Travel Sentiment and Trend Analytics Platform project

GitHub repo name: travel-sentiment-analytics

```
travel-sentiment-analytics/
■■■ data/
■   ■■■ raw/            (original dataset — never edit directly)
■   ■■■ cleaned/         (cleaned, readable text after processing)
■   ■■■ processed/       (numeric/vectorized data for ML)
■   ■■■ external/        (extra/supplementary datasets)
■■■ notebooks/           (numbered exploration notebooks)
■■■ src/
■   ■■■ preprocessing/   (reusable text-cleaning functions)
■   ■■■ utils/           (shared helper functions, config)
■■■ requirements.txt     (list of Python libraries needed)
■■■ .gitignore           (files Git should never track)
■■■ README.md            (project overview, shown on GitHub)
```

Note: folders app/, models/, dashboard/, reports/ will be added later, exactly when those project phases begin (not created empty in advance).

## 3. Why Each Starter File Exists

| File | Purpose |
|---|---|
| requirements.txt | Lists every Python library the project needs, so anyone can run pip install -r requirements.txt and set up the project in one step. |
| .gitignore | Tells Git which files/folders to never track — e.g. auto-generated cache files, large datasets, and secret credentials (.env). |
| README.md | First thing anyone sees on GitHub. Explains what the project does, the folder layout, and how to run it. |

## 4. Key Concepts Learned

**Repository (repo)** — A project folder that Git is tracking the history of.

**Commit** — A saved snapshot of your project at a point in time, with a message describing the change.

**Staging (git add)** — Choosing which changes will be included in the next commit.

**Remote / origin** — The online address (on GitHub) your local project is linked to.

**Push** — Uploading your local commits to GitHub.

**Branch (master)** — A version-line of your project. Most beginner projects use just one branch.

## 5. Commands Used Today (Reference)

**Check Git version**

```
git --version
```

**Set your name (one-time)**

```
git config --global user.name "Your Name"
```

**Set your email (one-time)**

```
git config --global user.email "you@example.com"
```

**Go to project folder**

```
cd "E:\Projects\your-project-folder"
```

**Start tracking this folder with Git**

```
git init
```

**See what's changed**

```
git status
```

**Stage all changes**

```
git add .
```

**Save a snapshot**

```
git commit -m "describe what changed"
```

**Link to GitHub repo**

```
git remote add origin .git
```

**Check remote link**

```
git remote -v
```

**Upload to GitHub (first time)**

```
git push -u origin master
```

**Upload to GitHub (after first time)**

```
git push
```

## 6. The Workflow to Repeat Every Work Session

Every time you finish a meaningful piece of work going forward, repeat this 3-step cycle:

```
1 git add . (stage your changes)
2 git commit -m "short description of what you did" (save a snapshot)
3 git push (upload to GitHub)
```

## 7. Project Links

GitHub repository: github.com/Krishnaaa0811/travel-sentiment-analytics

Local project path: E:\Projects\AI-Powered Travel Sentiment and Trend Analytics Platform project

## 8. Next Step

Find and download a real travel review dataset into data/raw/, then begin Week 1-2 work: exploring the dataset (01_data_collection.ipynb) before any cleaning or analysis begins.
